

SEQUENCE 2 – PROSPECTING NEW SALES – Email #1

[Subject] Wi-Fi problem? Find it. Solve it. Fast.

Email #1

Troubleshooting your wireless network doesn't have to be hard, or expensive.

If you are looking for a cost-effective wireless analyzer the AirCheck G3 Pro pretty much does it all. It can test, survey, troubleshoot, and map Wi-Fi networks – SUPER FAST – and it's rugged and portable, for any skill level.

A powerful tool that makes your entire team more productive. Would that be useful in your organization?

[Subject] A better way to survey Wi-Fi 6/6E

Email #2

“A picture is worth a thousand words” is especially true than when it comes to troubleshooting Wi-Fi. The problem is, most site survey software is too complex, too expensive, takes too long, and only does one job.

Finally, there is a faster, simpler and easier way to survey, visualize, troubleshoot, and document your Wi-Fi network.

NetAlly has just introduced the AirCheck™ G3 Pro handheld wireless analyzer with the [AirMapper Site Survey app](#). Do these capabilities seem like they’d be useful to you?

- A single instrument for all your Wi-Fi network support needs – from installation to troubleshooting and verification of ongoing changes.
- No dongle or tethered device means no lugging around a laptop
- Free collaboration and sharing within your team and 3rd parties
- A way to easily generate visual heatmaps – anytime they are needed

I’d be happy to arrange an online demonstration, discuss your specific needs, or send more information. Let me know!

Thanks,

[name/contact info]

SEQUENCE 2 – PROSPECTING NEW SALES – Email #3Email #3

[subject] Old dual-band Wi-Fi testers won't cut it anymore

The way WLAN validation and troubleshooting is performed has changed, and because of that old dual-band testers don't have the visibility you need to stay on top of your network. What you need is an analyzer that will not only allow you to validate Wi-Fi 6 coverage and performance...you need one that rules all the bands.

NetAlly's new AirCheck G3 Pro Wireless Analyzer offers:

- Native support for Wi-Fi 6 and the 2.4/5/6GHz bands
- Validates actual Wi-Fi 6/6E network operation
- Fast troubleshooting for connectivity and performance issues

There's much more this powerful, cost-effective tool can do. Check it out! happy to help you answer any questions or to arrange an online demonstration, discuss your specific needs, or send more information.

Thanks,
